# **Building a Culture of Innovation** (If government can do it, so can you!) City of Philadelphia

#### What is innovation in the public sector?

- → Process improvement
- → Culture change
- → Increased efficiency
- → Modernization
- → Transparency
- → Employee engagement

It is rarely about creating something new and shiny – public sector innovation isn't always flashy, but it is always deeply impactful.

#### What do we actually do?

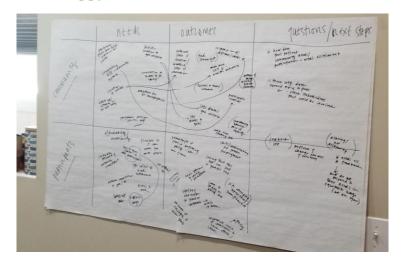

#### What does this work look like in practice?

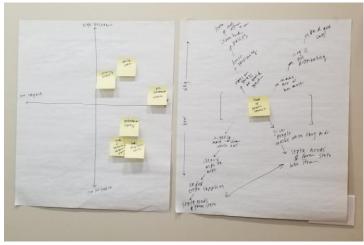

- Amy from the Water Department, who goes through the **Innovation Academy**, connects with previous PWD grads, and creates a department wide Innovation Committee to reimagine workplace policies and creative problem solving
- Andy from Parks & Recreation who also graduates from the **Innovation Academy**, and then applies for an **Innovation Fund** grant for a program that is wildly successful, taken to scale, and is now a fully funded PPR initiative
- The Office of Property Assessment, who uses **Innovation Consulting** to solicit feedback from every staff member about what would make them more comfortable as they transition to a new platform

## Are there any innovation activities I can use now?

Yes!

IMPACT MATRIX HOW / WHY LADDER

#### How can we be innovative in the virtual space?

Go low tech! Yes, there are some fantastic online tools that help with virtual facilitation and collaboration, but – I *do not use them*, and you don't need to either! **Here's why:** 

- 1 The more tech you use, the more chances that something will go wrong.
- Learning a new platform or tool takes a lot of time and prep work for both the facilitator and participants.
- "Zoom Fatigue" is real and there's value in taking tech breaks.
- Lower tech means more people can more equitably participate in your workshop.
- The key to good facilitation is authenticity if you don't like tech, don't use it!

#### Pre COVID

#### **During COVID**

## How do we engage employees at all levels in innovation?

**Senior leadership** – Need their buy in to enact the highest level of change (but lots can be accomplished without it!); find out what innovation means to them and sell to that perspective!

**Middle managers** – Looking for autonomy and growth; these are the people who have the capacity to champion innovation; train and invest in them so they want to stay and make your company better!

**Front line workers** – Have great ideas and aren't often leveraged for insight; make them feel valued and empowered to innovate; they want to be heard!

## What does collaboration with the private sector look like?

- Understand that we have a lot of rules to follow procurement processes, privacy concerns, equity issues, etc. We value transparency above all else!
- We move slowly because of those rules please be patient!
- Have a process and framework for collaboration be clear that all parties are on the same page re: expectations, outcomes, roles, etc.
- 4 Take the time to create a shared vision of what success looks like.
- Most of our money is already earmarked or budgeted, so we often need to find creative ways to engage with the private sector to actually "do" something, like a pilot or pro bono work.
